Cybersecurity - Graduate Level Assessment 23 Total Marks: 40 Answer all questions.

Multiple Choice (10 marks)

1. What are the types of scanning?
   (a) Port, network, and services
   (b) Network, vulnerability, and port
   (c) Passive, active, and interactive
   (d) Server, client, and network
2. How is IP address spoofing detected?
   (a) Installing and configuring a IDS that can read the IP header
   (b) Comparing the TTL values of the actual and spoofed addresses
   (c) Implementing a firewall to the network
   (d) Identify all TCP sessions that are initiated but does not complete successfully
3. ________________ is a process of wireless traffic analysis that may be helpful for forensic investigations or during troubleshooting any wireless issue.
   (a) Wireless Traffic Sniffing
   (b) WiFi Traffic Sniffing
   (c) Wireless Traffic Checking
   (d) Wireless Transmission Sniffing
4. The __________________ is anything which your search engine cannot search.
   (a) Haunted web
   (b) World Wide Web
   (c) Surface web
   (d) Deep Web
5. ______________________________ is the anticipation of unauthorized access or break to computers or data by means of wireless networks.
   (a) Wireless access
   (b) Wireless security
   (c) Wired Security
   (d) Wired device apps

True / False (10 marks)

Answer True or False

6. True or False: Troya is classified as a remote Trojan used for unauthorized access to compromised systems.
7. True or False: Message confidentiality also guarantees the authenticity of the sender's identity and integrity of the message content.
8. True or False: Burp Suite is primarily designed for network traffic sniffing in wireless environments.
9. True or False: UNIX and NT-based systems are known to have buffer overflow vulnerabilities due to their handling of memory allocation.
10. True or False: Applications developed in C and C++ are prone to buffer overflow due to the lack of string boundary checks in predefined functions.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Write a function to access the initial and last data of the given tuple record.
12. Write a function to multiply all the numbers in a list and divide with the length of the list.
