CSE-476: Introduction to Natural Language Processing
Quiz 1

## Multiple Choice Questions (Single correct)

*Instructions: Select the correct option with a short explanation.*

### Q1. Which option defines tokens inside an entity?

(A) Beginning of an entity

(B) Inside an entity

(C) Outside any entity

(D) Between two tokens

### Q2. Which option ignores labels and uses only observations?

(A) It uses only words (observations) and ignores labels

(B) It is identical to an HMM

(C) It models transitions between labels but does not consider the words

(D) It models emissions P(word | label)

### Q3. Which option is P(label | previous label)?

(A) P(label | previous label)

(B) P(label | word)

(C) P(word | previous word)

(D) P(word | label)

### Q4. Which option assigns subject/object via syntax?

(A) A task that identifies predicates in a sentence and labels roles of elements such as agent, theme, or location

(B) A process that assigns grammatical roles like subject and object based on syntactic structure

(C) A method that classifies named entities and links them to a knowledge base

(D) A technique that labels words with their parts of speech and morphological features

Q5. Which option replaces repeated characters with counts?

(A) A technique that compresses text by replacing consecutive repeated characters with a count and a symbol

(B) A tokenization method that iteratively merges the most frequent pair of symbols in a corpus

(C) A tokenization method that splits text based on whitespace and punctuation

(D) A character-level encoding scheme that assigns fixed-length binary codes to characters

Q6. Which option describes labeling tokens with grammar?

(A) To label each token with a grammatical category

(B) To convert text into a sequence of symbols suitable for modeling

(C) To reduce vocabulary size to zero

(D) To assign probabilities to sentences

Q7. Which option says it produces too many tokens?

(A) It produces too many tokens

(B) It does not work well for languages without explicit word boundaries

(C) It cannot tokenize English at all

(D) It ignores punctuation entirely

Q8. Which option is part-of-speech tagging?

(A) Part-of-speech tagging

(B) Named Entity Recognition

(C) Dependency parsing

(D) Sentiment analysis

Q9. Which option says BIO requires too many labels?

(A) It cannot represent overlapping or nested entities

(B) It requires too many labels

(C) It does not support multiple entity types

(D) It ignores entity boundaries

Q10. Which option is speed vs accu

(A) Speed vs accuracy

(B) Tokenized sequence length vs vocabulary size

(C) Precision vs recall

(D) Memory vs computation

*End of Paper*
