Health Sciences - K-12 Level Assessment 6 Total Marks: 40 Answer all questions.

Multiple Choice (10 marks)

1. The best evidence exists for which nutrients in the prevention of age related cognitive decline?
   (a) N-3 fatty acids
   (b) Phytochemical
   (c) N-6 fatty acids
   (d) Long chain saturated fats

2. Which of these factors reduces the risk for cancer of the colorectum?
   (a) Vitamin C
   (b) Dietary fibre
   (c) Alcohol
   (d) Oestrogen

3. What should elite athletes ideally consume during prolonged high intensity exercise (>2.5 hours)?
   (a) 60 g glucose per hour
   (b) 60 g glucose plus fructose per hour
   (c) 90 g glucose per hour
   (d) 90 g glucose plus fructose per hour

4. Which are the FIVE main series of apoproteins that have been identified?
   (a) apoA, apoB, apoC, apoD, and apoE
   (b) apoA, apo(a), apoB, apoC and apoE
   (c) apoA, apoB, apoC, apo E, and apoL
   (d) apoB, apoC, apoD, apoE and apoM

5. What endogenous substrate source provides the most energy during moderate to high intensity exercise?
   (a) Liver glycogen
   (b) Muscle glycogen
   (c) Intramuscular lipid
   (d) Adipose tissue lipid

True / False (10 marks)

Answer True or False

6. True or False: Reduced secretion of intrinsic factor, atrophic gastritis, and Helicobacter pylori infection all contribute to vitamin B 12 deficiency in older adults.

7. True or False: Vitamin D is required for vision in dim light and improves night vision.

8. True or False: Eosinophilic oesophagitis is not related to allergic reactions or sensitivities.

9. True or False: High nutrient requirements for tissue turnover do not contribute to the risk of vitamin or mineral deficiencies in older adults.

10. True or False: Vitamin A is essential for the activation of vitamin D receptors in the body.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the potential nutritional deficiencies in a vegan diet, focusing on the role of Vitamin B 12 and its importance for overall health.

12. Discuss the importance of maintaining specific blood pressure and lipid levels in adults with diabetes to prevent cardiovascular disease. What are the recommended targets, and why do they matter?
