

Multiple Choice (10 marks)

1. A woman transmits color blindness to her son although she herself displays normal color vision. The defect transmitted by this woman represents a characteristic of her
 - (a) phenotype
 - (b) Mitochondrial DNA
 - (c) Autosomes
 - (d) Recessive genes
 - (e) dominant genes
2. Harlow's monkey experiment illustrated
 - (a) that language is a uniquely human skill.
 - (b) the importance of physical contact to development.
 - (c) that primates have a hierarchy based on physical strength.
 - (d) that monkeys have a preference for inanimate objects.
 - (e) that primates can learn complex tasks.
3. "Time-out" procedures in manipulating behaviors are based on the conditioning concept of
 - (a) habituation
 - (b) differential reinforcement
 - (c) stimulus generalization
 - (d) positive punishment
 - (e) oval of a positive reinforcer
4. Which of the following item difficulty (p) levels maximizes the differentiation of examinees into high- and low-performing groups:
 - (a) 0
 - (b) 0.5
 - (c) 0.8
 - (d) 0.3
 - (e) 1.2
5. Individuals with Moderate Mental Retardation
 - (a) usually display advanced cognitive abilities despite their condition

- (b) make up the majority of the mentally retarded population
- (c) can live independently without any supervision
- (d) are typically unable to participate in unskilled work
- (e) often acquire academic skills up to a post-secondary level

True / False (10 marks)

Answer True or False

6. True or False: Bingeing is the primary feature that distinguishes anorexia nervosa from bulimia nervosa.
7. True or False: In a reflex arc, the impulse primarily travels from the effector back to the receptor before reaching the brain.
8. True or False: Damage to the back of the right frontal lobe primarily affects the ability to recognize faces and interpret sounds.
9. True or False: Children develop internal representational systems during Piaget's pre-operational stage, allowing them to describe people and events.
10. True or False: Acquisition trials involve a neutral stimulus that signals an unconditioned stimulus, leading to a conditioned response.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the role of psychological inconsistency in cognitive dissonance theory, focusing on how it influences the importance of maintaining consistent beliefs or actions.
12. Discuss the concept of Type II error in hypothesis testing, including its relationship with statistical power. Analyze the factors that influence power and critically evaluate which factor is incorrectly defined regarding its impact on power.
