 - (a) 100,000
 - (b) 500,000
 - (c) 1,000,000
 - (d) tens of millions
5. Pompeii was unusually well preserved because:
 - (a) the layer of volcanic pumice created a seal over the remains.
 - (b) avalanches pushed the remains into the sea and seawater preserves things.
 - (c) poisonous volcanic gases killed people instantly.
 - (d) the Romans embalmed the victims with salt from seawater.

True / False (10 marks)

Answer True or False

6. True or False: The early Mesolithic Maglemosian culture was adapted to a forest and lakeside environment.
7. True or False: Opportunistic foraging requires careful planning and scheduling to ensure a steady food supply.
8. True or False: The skulls of early migrants closely resemble those of modern Native Americans, indicating a common ancestry.
9. True or False: The spread of shared religious iconography in ancient civilizations usually signifies a common cultural origin.
10. True or False: Humans share a common ancestor with chimpanzees, which means they are direct descendants of chimpanzees.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the significance of archaeological sites in understanding past human societies, including how they provide evidence of daily life and work practices.
12. Discuss the various hypotheses for why hominids evolved to walk on two legs, and explain why braincase expansion is not considered a primary factor in this development.
