

Multiple Choice (10 marks)

1. A _____ is a method in which a computer security mechanism is bypassed untraceable for accessing the computer or its information.
 - (a) front-door
 - (b) backdoor
 - (c) clickjacking
 - (d) key-logging
2. What was the first buffer overflow attack?
 - (a) Love Bug
 - (b) SQL Slammer
 - (c) Morris Worm
 - (d) Code Red
3. Which of the following is a Wireless traffic Sniffing tool?
 - (a) Maltego
 - (b) BurpSuit
 - (c) Nessus
 - (d) Wireshark
4. The stack is memory for storing
 - (a) Local variables
 - (b) Program code
 - (c) Dynamically linked libraries
 - (d) Global variables
5. Which of the following deals with network intrusion detection and real-time traffic analysis?
 - (a) John the Ripper
 - (b) L0phtCrack
 - (c) Snort
 - (d) Nessus

True / False (10 marks)

Answer True or False

6. True or False: IM-Trojans are malicious programs specifically designed to steal credentials from instant messaging applications.
7. True or False: Encryption and decryption do not ensure data integrity, which is the assurance that information remains unaltered during transmission.
8. True or False: WPA 2 is less secure than WEP because it uses weaker encryption methods.
9. True or False: Comparing the TTL values of actual and spoofed IP addresses can effectively detect IP address spoofing.
10. True or False: WiFi traffic sniffing is exclusively used for enhancing network performance and does not assist in forensic investigations.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the implications of EXE's approach to handling timeouts in the STP solver regarding unsatisfiable constraint queries on a path in cybersecurity.
12. Discuss the advantages of using whitebox fuzzing in cybersecurity, particularly in its ability to explore all code paths in a given program. How does this impact vulnerability detection?
