

Multiple Choice

1. **Answer:** A

Options: A) Restrict what operations/data the user can access; B) Determine if the user is an attacker; C) Flag the user if he/she misbehaves; D) Determine who the user is

Note: Correct option: A - Restrict what operations/data the user can access

2. **Answer:** C

Options: A) boundary hacks; B) memory checks; C) boundary checks; D) buffer checks

Note: Correct option: C - boundary checks

3. **Answer:** B

Options: A) Memory leakage; B) Buffer-overflow; C) Less processing power; D) Inefficient programming

Note: Correct option: B - Buffer-overflow

4. **Answer:** A

Options: A) It generates each different input by modifying a prior input; B) It works by making small mutations to the target program to induce faults; C) Each input is mutation that follows a given grammar; D) It only makes sense for file-based fuzzing, not network-based fuzzing

Note: Correct option: A - It generates each different input by modifying a prior input

5. **Answer:** B

Options: A) Confidentiality; B) Availability; C) Correctness; D) Integrity

Note: Correct option: B - Availability

True / False

6. **Answer:** True

Options: A) True; B) False

Note: LLM-generated true statement based on MCQ.

7. **Answer:** False

Options: A) True; B) False

Note: LLM-generated false statement. Correct answer: 'buffer'.

8. **Answer:** False

Options: A) True; B) False

Note: LLM-generated false statement. Correct answer: 'Whitebox'.

9. **Answer:** True

Options: A) True; B) False

Note: LLM-generated true statement based on MCQ.

10. **Answer:** False

Options: A) True; B) False

Note: LLM-generated false statement. Correct answer: 'IM - Trojans'.

Long Form Response

11. **Answer:** `def is_majority(arr, n, x): | return False | return True | return False | def
binary_search(arr, low, high, x): | return mid | return binary_search(arr, (mid + 1),
high, x) | return binary_search(arr, low, (mid - 1), x) | return -1`

Note: Students should provide a detailed explanation referencing algorithm steps.

12. **Answer:** `def are_Equal(arr 1,arr 2,n,m): | return False | return False | return True`

Note: Students should provide a detailed explanation referencing algorithm steps.
