 - (d) bedrock hills roughened by the passing of a glacier
5. The average temperatures over a four-month period were 31, 24, 18, and 12 degrees Celsius. What is the median temperature for these four months?
 - (a) 15
 - (a) 21
 - (a) 27
 - (a) 33

True / False (10 marks)

Answer True or False

6. True or False: Deer shed their antlers in the fall as a strategy to avoid being eaten by predators.
7. True or False: The marketing department of a manufacturing organization is responsible for advertising products to consumers.
8. True or False: Cutting a piece of metal in half is an example of a chemical change because it alters the material's properties.
9. True or False: Hydraulic systems involve liquids, whereas pneumatic systems involve gases.
10. True or False: The order of celestial bodies from largest to smallest is Sun, Jupiter, Earth, and Moon.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the significance of height measurements in different units. How does converting 6 feet to metric units enhance our understanding of height in a global context?
12. Discuss the geological processes that can result in the arrangement of rock layers where younger layers are found beneath older ones. What implications does this have for understanding Earth's history?
