

Multiple Choice (10 marks)

1. Which step should a student do in order to be able to repeat an experiment?
 - (a) do the experiment many times
 - (b) keep a record of all procedures
 - (c) make a model of the set-up of the experiment
 - (d) change some of the conditions of the experiment
2. Leopard's opening chant suggests that he is
 - (a) unhappy.
 - (b) confused.
 - (c) confident.
 - (d) generous.
3. What do the energy resources uranium and coal have in common?
 - (a) They both are formed from the remains of dead organisms.
 - (b) They both are acquired by mining the lithosphere.
 - (c) They both release energy through combustion.
 - (d) They both generate radioactive wastes.
4. Many different plant and animal species live in the Amazon rainforest. Which is the most likely result of large areas of deforestation in the Amazon rainforest?
 - (a) an increase in animal populations
 - (b) a decrease in oxygen production
 - (c) an increase in precipitation
 - (d) a decrease in pollutants
5. Why does a town in the desert rarely experience early morning fog as compared to a town along the coast?
 - (a) There is less rainfall in the desert.
 - (b) Temperatures vary more in the desert.
 - (c) There is less water vapor in the desert air.
 - (d) There are fewer plants in the desert.

True / False (10 marks)

Answer True or False

6. True or False: The gravitational pull of Earth causes the Moon to rotate and revolve in sync, making about 59
7. True or False: Fossil fuels are called nonrenewable resources because they take a very long time to produce.
8. True or False: Biological magnification of pollutants is most likely to be greatest in an estuary due to high nutrient levels and biodiversity.
9. True or False: The Moon is less bright than the Sun, making it safer to look at with the naked eye.
10. True or False: A drought can change an ecosystem quickly, similar to a wildfire, by reducing water availability in a short time.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss how data from scientific literature can strengthen the conclusions of a lab group investigating plant growth rates near a classroom window.
12. Discuss the effects of decreasing the heat energy of a gas. What changes might occur in its state, behavior, and properties? Provide examples to support your analysis.
