

Multiple Choice

1. **Answer:** A

Options: A) Levels of oxygen, acidity or alkalinity of the medium; B) Temperature changes, light exposure; C) Atmospheric pressure, noise levels; D) Nitrogen levels, radiation exposure; E) Soil texture, light wavelength

Note: Correct option: A - Levels of oxygen, acidity or alkalinity of the medium

2. **Answer:** C

Options: A) 50%; B) 100%; C) 0%; D) 10%; E) 75%

Note: Correct option: C - 0%

3. **Answer:** A

Options: A) Mate attraction, species recognition, defense, and territorial claim; B) For heat regulation; C) For hunting; D) For navigation; E) For mineral absorption

Note: Correct option: A - Mate attraction, species recognition, defense, and territorial claim

4. **Answer:** C

Options: A) Ribosome; B) Mitochondrion; C) Chloroplast; D) Lysosome; E) Endoplasmic reticulum

Note: Correct option: C - Chloroplast

5. **Answer:** D

Options: A) Alpha-ketoglutarate; B) Glutamate; C) Acetyl CoA; D) Oxaloacetate; E) Citrate

Note: Correct option: D - Oxaloacetate

True / False

6. **Answer:** True

Options: A) True; B) False

Note: Little is known about the mechanisms underlying irregular bleeding in HT users. This is the first report of uNK cells and their association with regulating cytokines in postmenopausal endometrium and demonstrates a possible mechanism by which HT may induce irregular bleeding.

7. **Answer:** True

Options: A) True; B) False

Note: There is good correlation and agreement between end-tidal CO(2) and arterial CO(2) in ELBW infants in the EtCO(2) range 30-50 mmHg. End-tidal CO(2) monitoring can be helpful in trending or for screening abnormal PaCO(2) values in ELBW infants in first week of life.

8. **Answer:** True

Options: A) True; B) False

Note: The study supports the hypothesis that nurses' aides who were exposed to ETS at home during childhood have an increased risk of long-term sickness absence.

9. **Answer:** True

Options: A) True; B) False

Note: For conditions with a well-developed quality of care evidence base, such as hypertension and diabetes, a single structured implicit review to assess the quality of care over a period of time is moderately reliable. This method could be a reasonable complement or alternative to explicit indicator approaches for assessing and comparing quality of care. Structured implicit review, like explicit quality measures, must be used more cautiously for illnesses for which the evidence base is less well developed, such as COPD and acute, short-course illnesses.

10. **Answer:** True

Options: A) True; B) False

Note: The presentation of the first twin at delivery can be determined by sonogram by the 32 nd week of gestation in over 90% of twin pregnancies.

Long Form Response

11. **Answer:** Evidence from taxonomy, morphology, comparative biochemistry, embryological structures and development, and genetics.. Explain why this is the correct answer and provide supporting evidence. Reference key facts or concepts that support this choice.

Note: Long-form derived from MCQ; award credit for stating the correct idea and giving supporting reasoning.

12. **Answer:** Tropical rain forest. Explain why this is the correct answer and provide supporting evidence. Reference key facts or concepts that support this choice.

Note: Long-form derived from MCQ; award credit for stating the correct idea and giving supporting reasoning.
