True / False (10 marks)

Answer True or False

6. True or False: Individuals with Wernicke's aphasia typically exhibit fluent but unintelligible speech, marked by a lack of meaningful content.
7. True or False: Whole-interval recording measures the total duration of a behavior rather than its frequency within a time period.
8. True or False: Operant extinction is not the preferred approach if a temporary increase in the behavior cannot be tolerated.
9. True or False: Meditation is associated with increased alpha and theta brain wave activity, along with a decrease in metabolism and heart rate.
10. True or False: The United States ranks highest on Hofstede's dimension of power distance, indicating a strong acceptance of hierarchical structures.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the relationship between stereotyping and attribution theory, analyzing how attribution theory is informed by specific types of stereotyping in social psychology.
12. Discuss the concepts of standard scores and percentiles in psychological testing. Analyze their significance in comparing individuals across tests and within the same test context.
