

Multiple Choice (10 marks)

1. Standardized tests are
 - (a) tests that are used to measure intelligence
 - (b) tests that are given only once a year
 - (c) tests that have no right or wrong answers
 - (d) tests for which a person's performance can be compared with a pilot group
 - (e) any examination given by your state or country
2. MRI is preferred over CT (computed tomography) in all of the following scenarios, EXCEPT:
 - (a) The detection of spinal cord injuries
 - (b) The detection of white matter abnormalities
 - (c) The detection of soft tissue injuries
 - (d) The detection of a small tumor
 - (e) The detection of lung cancer
3. In a skewed smooth distribution with a tail extended to the left, the statistic with the highest value is the
 - (a) median
 - (b) interquartile range
 - (c) geometric mean
 - (d) quartile deviation
 - (e) variance
4. In a two-variable situation in which one variable is dichotomous and the other is interval and continuous, which of the following correlation procedures is most appropriate
 - (a) Kendal's tau
 - (b) Biserial correlation
 - (c) Cramer's V
 - (d) Eta
 - (e) Goodman and Kruskal's gamma
5. During the manic phase of a bipolar disorder, individuals are most likely to experience
 - (a) extreme fatigue

- (b) high self-esteem
- (c) memory loss
- (d) intense fear and anxiety
- (e) uncontrollable grief and despair

True / False (10 marks)

Answer True or False

6. True or False: Semantic memory is primarily responsible for recalling personal experiences acquired within the past few hours to days.
7. True or False: Hemiplegia is a neurological condition that can be genetically inherited, affecting motor function on one side of the body.
8. True or False: Proactive interference occurs when previously learned information, such as list 1, hinders the recall of new information, like list 2.
9. True or False: All trainees experience a significant decrease in performance after completing the training program.
10. True or False: A conditioned response is an automatic reaction to an unconditioned stimulus that requires prior experience to develop.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss how client-centered therapy's perspective on human nature as inherently capable of self-actualization differentiates it from classical therapeutic approaches.
12. Discuss the role of theory development in qualitative research, specifically in case studies, and analyze why the assumption that case studies can be generalized may be problematic.
