 - (a) performance review
 - (b) job analysis
 - (c) job description
 - (d) organizational analysis
 - (e) workforce analysis
5. The position on the basilar membrane at which waves reach their peak depends on the frequency of a tone, according to which theory?
 - (a) frequency theory

- (b) dual-process theory
- (c) specificity theory
- (d) trichromatic
- (e) gestalt theory

True / False (10 marks)

Answer True or False

6. True or False: Test validity is often synonymous with dependability, indicating the extent to which a test measures what it claims to measure.
7. True or False: Lack of exercise is a critical factor in Type A behavior that contributes to an increased risk of heart disease.
8. True or False: In Bandura's social learning theory, self-reinforcement plays a crucial role in the maintenance of learned behavior over time.
9. True or False: Many children are likely to learn to ride a bicycle before they can clap their hands.
10. True or False: Research into frustration has illuminated the mechanisms underlying paradoxical reward in behavioral psychology.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss Berkowitz's revision of the frustration-aggression hypothesis, emphasizing the role of environmental aggressive cues in the relationship between frustration and aggression.
12. Discuss the psychological effects of crowding, specifically analyzing gender differences in stress responses, and evaluate the implications of these differences in social settings.
