 - (c) "the judgment of a "reasonable woman" that an act is offensive. "
 - (d) the judgment of a "reasonable man" that an act is offensive.
 - (e) a situation where an employee makes sexual demands to their supervisor.
3. Research suggests children's successful adjustment to the divorce of their parents is most related to:
 - (a) the quality of the parent-child relationships prior to the divorce.
 - (b) the degree of post-divorce conflict between the parents.
 - (c) the child's academic performance prior to the divorce.
 - (d) the frequency of contact with the noncustodial parent.
 - (e) the gender of the child.
4. Kohler's studies with apes are seen as demonstrating
 - (a) that apes are able to use objects from their natural environment as tools.
 - (b) that apes can learn through operant conditioning.
 - (c) that learning can occur via insight.
 - (d) the apes' ability to communicate.
 - (e) latent learning in primates.
5. A classically conditioned response can best be eliminated by presentation of
 - (a) the unconditioned stimulus a few seconds before the conditioned stimulus
 - (b) a neutral stimulus
 - (c) both the conditioned and unconditioned stimulus simultaneously
 - (d) a neutral stimulus immediately after the unconditioned stimulus
 - (e) the unconditioned stimulus without a neutral stimulus

True / False (10 marks)

Answer True or False

6. True or False: Aggressiveness is an exclusively human trait, with no evidence of its presence in other animal species.
7. True or False: In expectancy theory, 'valence' refers to the employee's beliefs about the value of rewards provided for successful performance.
8. True or False: Transfer of training is solely defined by the concepts of cognitive transfer, affective transfer, and psychomotor transfer.
9. True or False: Individuals in the pseudoindependent stage are convinced that racism is no longer a relevant issue in society.
10. True or False: High levels of arousal consistently enhance learning and performance outcomes across all tasks.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

11. Discuss the concept of cognitive dissonance as described by Festinger, analyzing its implications for behavior adaptation in relation to intentions and beliefs.
12. Discuss the concept of vicarious liability in psychology, particularly in the context of a psychologist's role as a researcher. What implications does this have for ethical practice?
