

Cybersecurity - Graduate Level Assessment 7

Instructions

- Answer all questions.

Multiple Choice

Question 1

(2 marks)

The _____ is anything which your search engine cannot search.

- A. Haunted web
- B. World Wide Web
- C. Surface web
- D. Deep Web

Question 2

(2 marks)

A hash function guarantees the integrity of a message. It guarantees that the message has not be

- A. Replaced
- B. Overview
- C. Changed
- D. Violated

Question 3

(2 marks)

When the data must arrive at the receiver exactly as they were sent, its called

- A. Message Condentiality
- B. Message Integrity
- C. Message Splashing

D. Message Sending

Question 4

(2 marks)

A packet filter firewall filters at the

A. Application or transport

B. Data link layer

C. Physical Layer

D. Network or transport layer

Question 5

(2 marks)

The Message confidentiality or privacy means that the sender and the receiver expect

A. Integrity

B. Confidentiality

C. Authentication

D. Nonrepudiation

True / False

Question 1

(2 marks)

A buffer overflow occurs when the program detects a filled buffer and begins to reject additional requests for memory.

True

False

Question 2

(2 marks)

WEP is considered a reliable wireless security protocol due to its encryption capabilities.

True

False

Question 3

(2 marks)

The mishandling of undefined variables is a common vulnerability within the transport layer protocols.

True

False

Question 4

(2 marks)

A buffer-overflow attack exploits vulnerabilities by overflowing a buffer to inject malicious instructions into memory.

True

False

Question 5

(2 marks)

The .Net framework is primarily designed for building secure applications and does not facilitate vulnerability exploitation.

True

False

Long Form

Question 1

(10 marks)

Discuss why a compiler cannot determine the absolute address of a local variable at compile time, particularly in relation to stack allocation and function call dynamics.

Type your answer here...

Question 2

(10 marks)

Discuss the classic security properties in cybersecurity, identifying which one is not traditionally included and analyzing its significance in the context of overall security frameworks.
