True / False (10 marks)

Answer True or False

6. True or False: A 3-input NAND gate will have 6 entries in its truth table, which is the number of input combinations.
7. True or False: The evaluated vector function at the point $(-1, 1, 2)$ results in $-2 + e^1$.
8. True or False: The energy dissipated in a 2 resistor with current $i(t) = \cos^2(t)$ from $t = 0$ to $t = 5$ sec is 5.25 J.
9. True or False: A TV signal with 80% audio modulation has a carrier swing of 12 kHz and a frequency deviation of 24 kHz.
10. True or False: Resolution refers to the smallest change in a measured variable that an instrument can detect and respond to.
