

Multiple Choice (10 marks)

1. What does Freud claim to be the main function of dreams? How is this function fulfilled?
 - (a) Dreams serve no real purpose and are random firings of the brain during sleep
 - (b) Dreams are a manifestation of our subconscious fears and anxieties
 - (c) Dreams are the mind's way to rehearse responses to threatening situations
 - (d) Dreams are a response to our physical body needs
 - (e) Dreams are the brain's method of organizing and storing memories
2. In learned helplessness research, it was found that giving solvable problems eliminated the helplessness caused by unsolvable problems. It is argued that this is due to
 - (a) the shift in locus of control from internal to external
 - (b) a reduction in stress levels caused by the presence of solvable problems
 - (c) the application of a continuous reinforcement schedule
 - (d) a practice effect
 - (e) a boost in self-confidence after solving problems
3. Abraham Maslow proposed the idea that some motives are more imperative to survival than others. Which of the following approaches expresses this?
 - (a) Homeostatic regulation
 - (b) Hierarchy of needs
 - (c) Self-determination theory
 - (d) Intrinsic motivation
 - (e) Maslow's pyramid of desire
4. Images and sounds are maintained in sensory memory for:
 - (a) less than 5 seconds.
 - (b) 30 to 45 seconds.
 - (c) only while the sensory input is present.
 - (d) 10 to 15 seconds.
 - (e) exactly 5 minutes.
5. In time-out, a disruptive child who wants to stay with his or her class is removed from the classroom. This exemplifies

- (a) negative reinforcement
- (b) extrinsic reinforcement
- (c) intrinsic reinforcement
- (d) operant conditioning
- (e) positive punishment

True / False (10 marks)

Answer True or False

- 6. True or False: The medulla is located at the most central and protected part of the brain, essential for autonomic functions.
- 7. True or False: Monetary incentives significantly enhance learning outcomes in individuals with antisocial personality traits.
- 8. True or False: The axon terminal is responsible for transmitting electrical signals between neurons rather than synthesizing neurotransmitters.
- 9. True or False: Ignoring the ethical violation is an acceptable first step if it does not directly affect your work.
- 10. True or False: Child abuse and neglect are most commonly associated with a disorganized/disoriented attachment pattern in children.

Long Form Response (20 marks)

Answer each question with a clear and complete explanation.

- 11. Discuss how confabulatory responses in the Rorschach test, specifically overgeneralizing from a part to the whole, indicate an inability to perceive abstract concepts.
- 12. Discuss the Delegating Style in Hersey and Blanchard's Situational Leadership Model, focusing on its characteristics of low task and relationship orientation and its implications for job maturity and subordinates.
